

Developing Next-Generation Smart Grids: Modeling and Simulation with MATLAB and Simulink

Valtteri Forsman
Application Engineer
MathWorks

Electrification of Everything

The electrification of everything

Clean Electricity Production

The electrification of everything

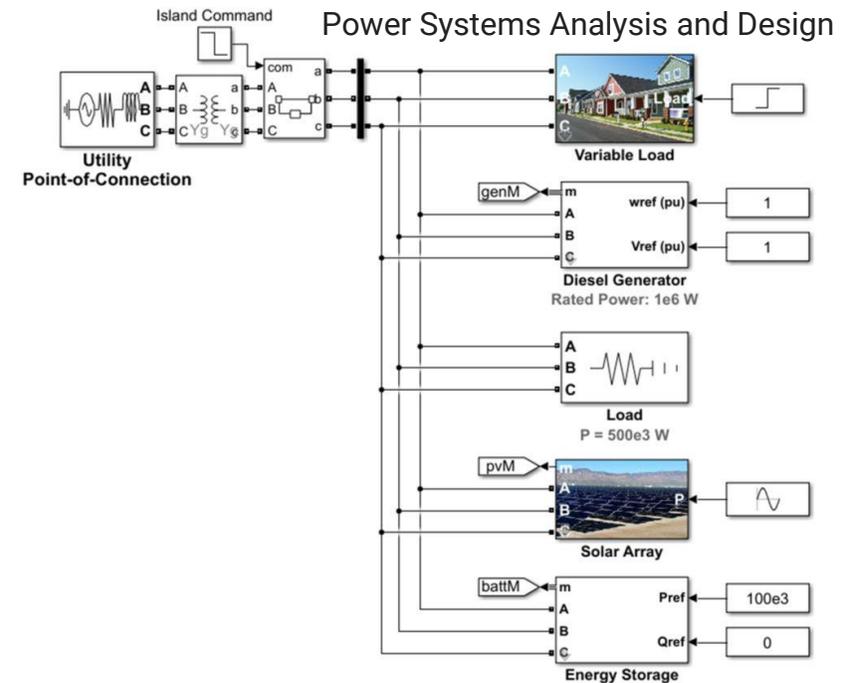

Electrified Transportation

Moving towards a clean, electrified future

How can modeling, simulation and analytics best support moving technology from early-stage feasibility through to proven in-service operation?

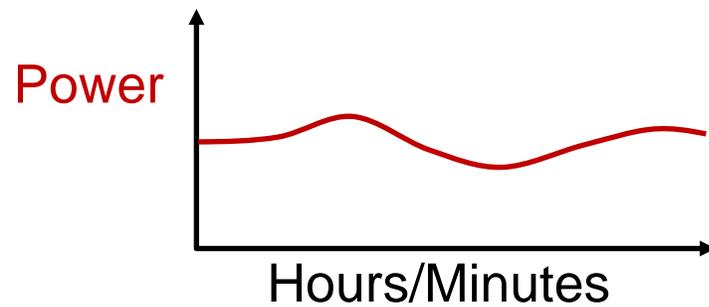

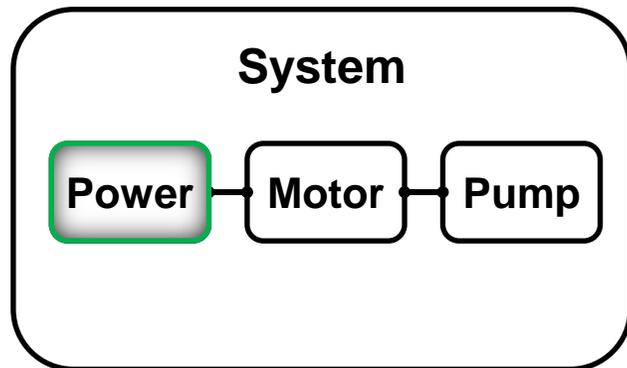

Agenda

- **Modeling and simulation of renewable energy systems**
- System-level and control system design for smart grids
- Deploying and testing control systems

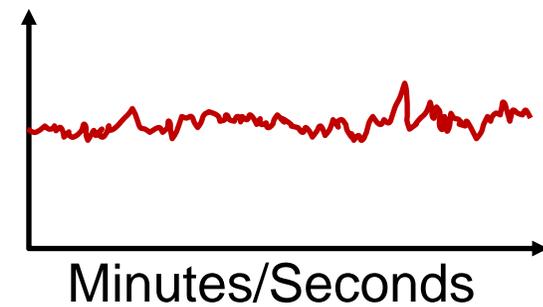

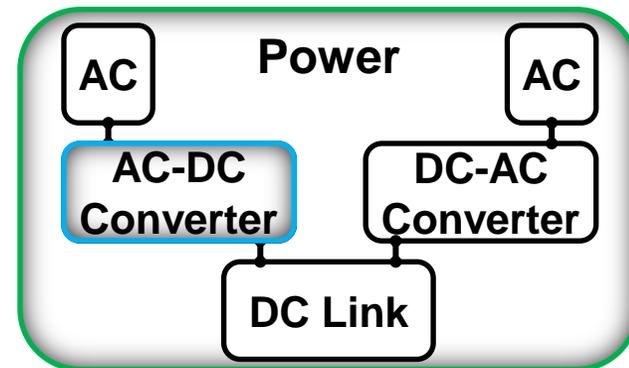

Simscape Electrical Simulation Modes

Different Fidelities for Different Tasks

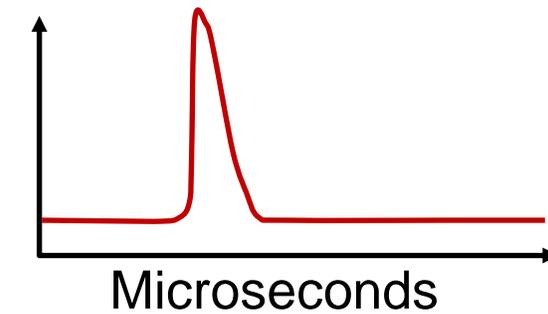

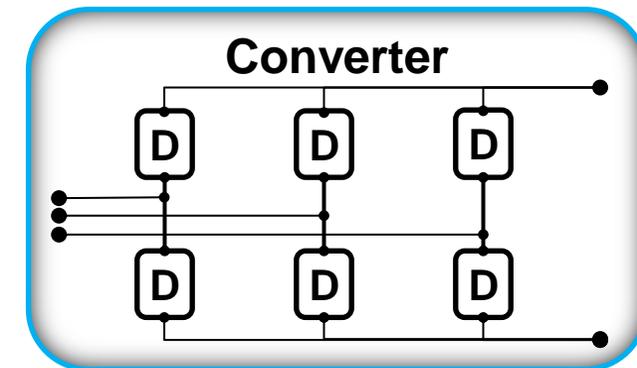

System-Level Behavior

Average-Value

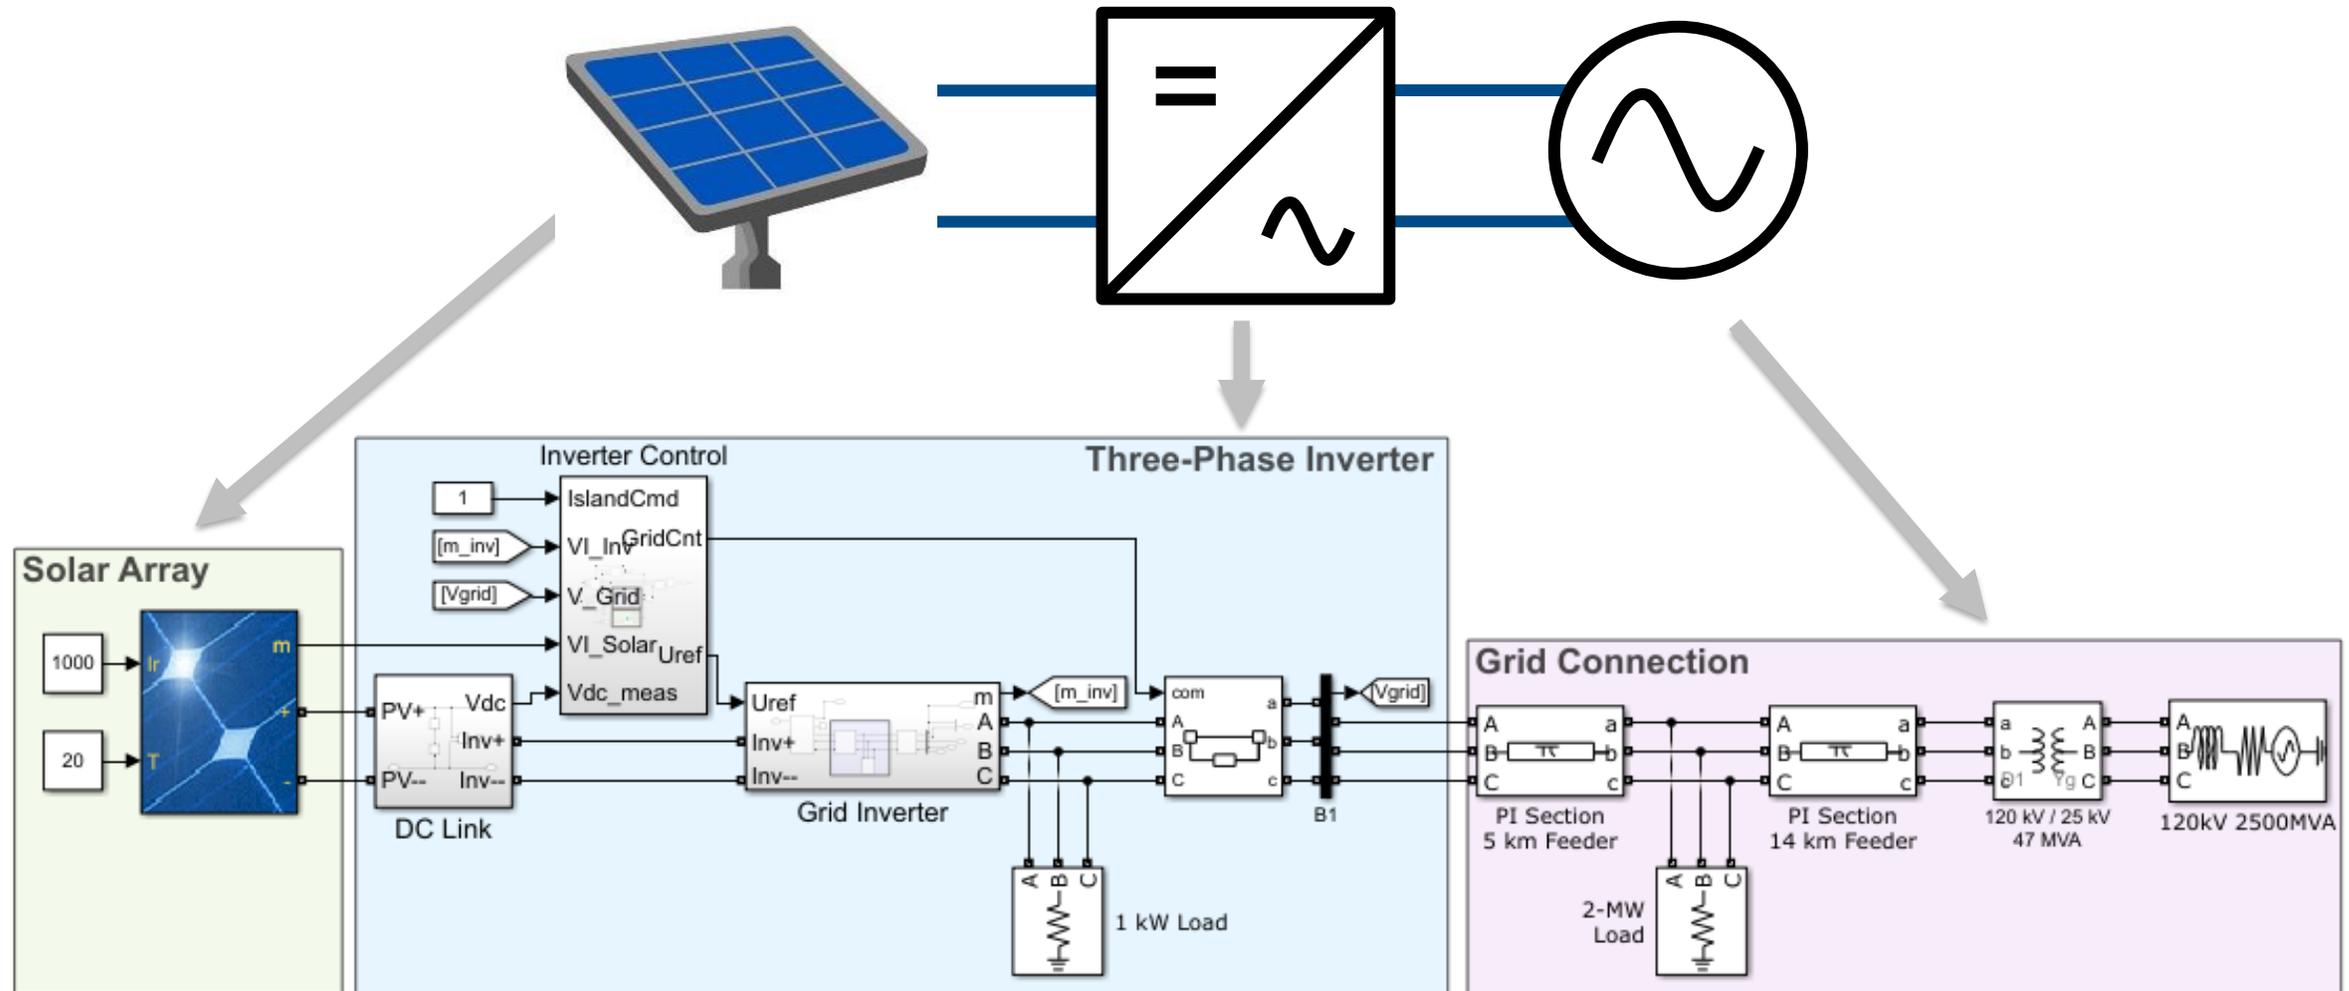

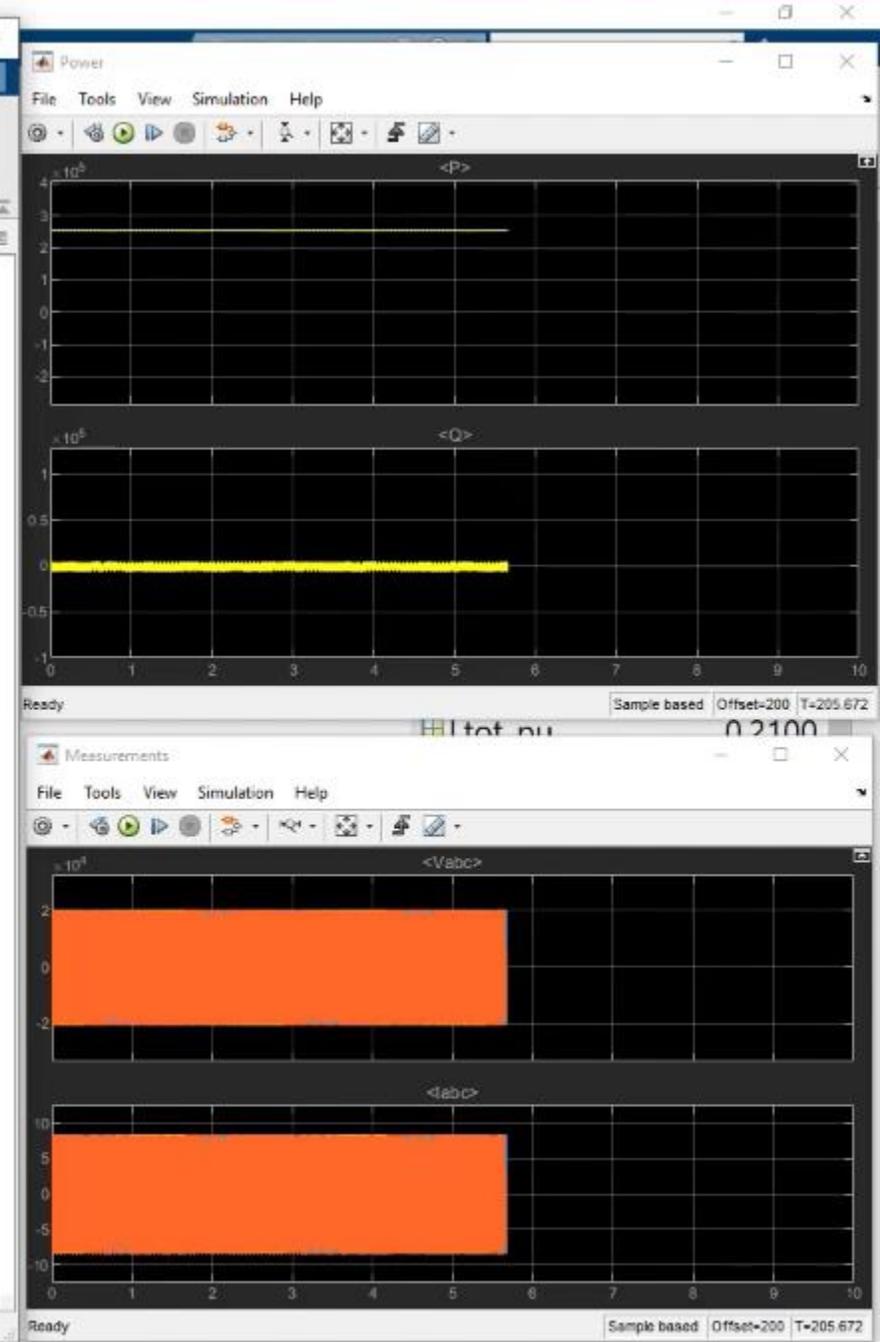

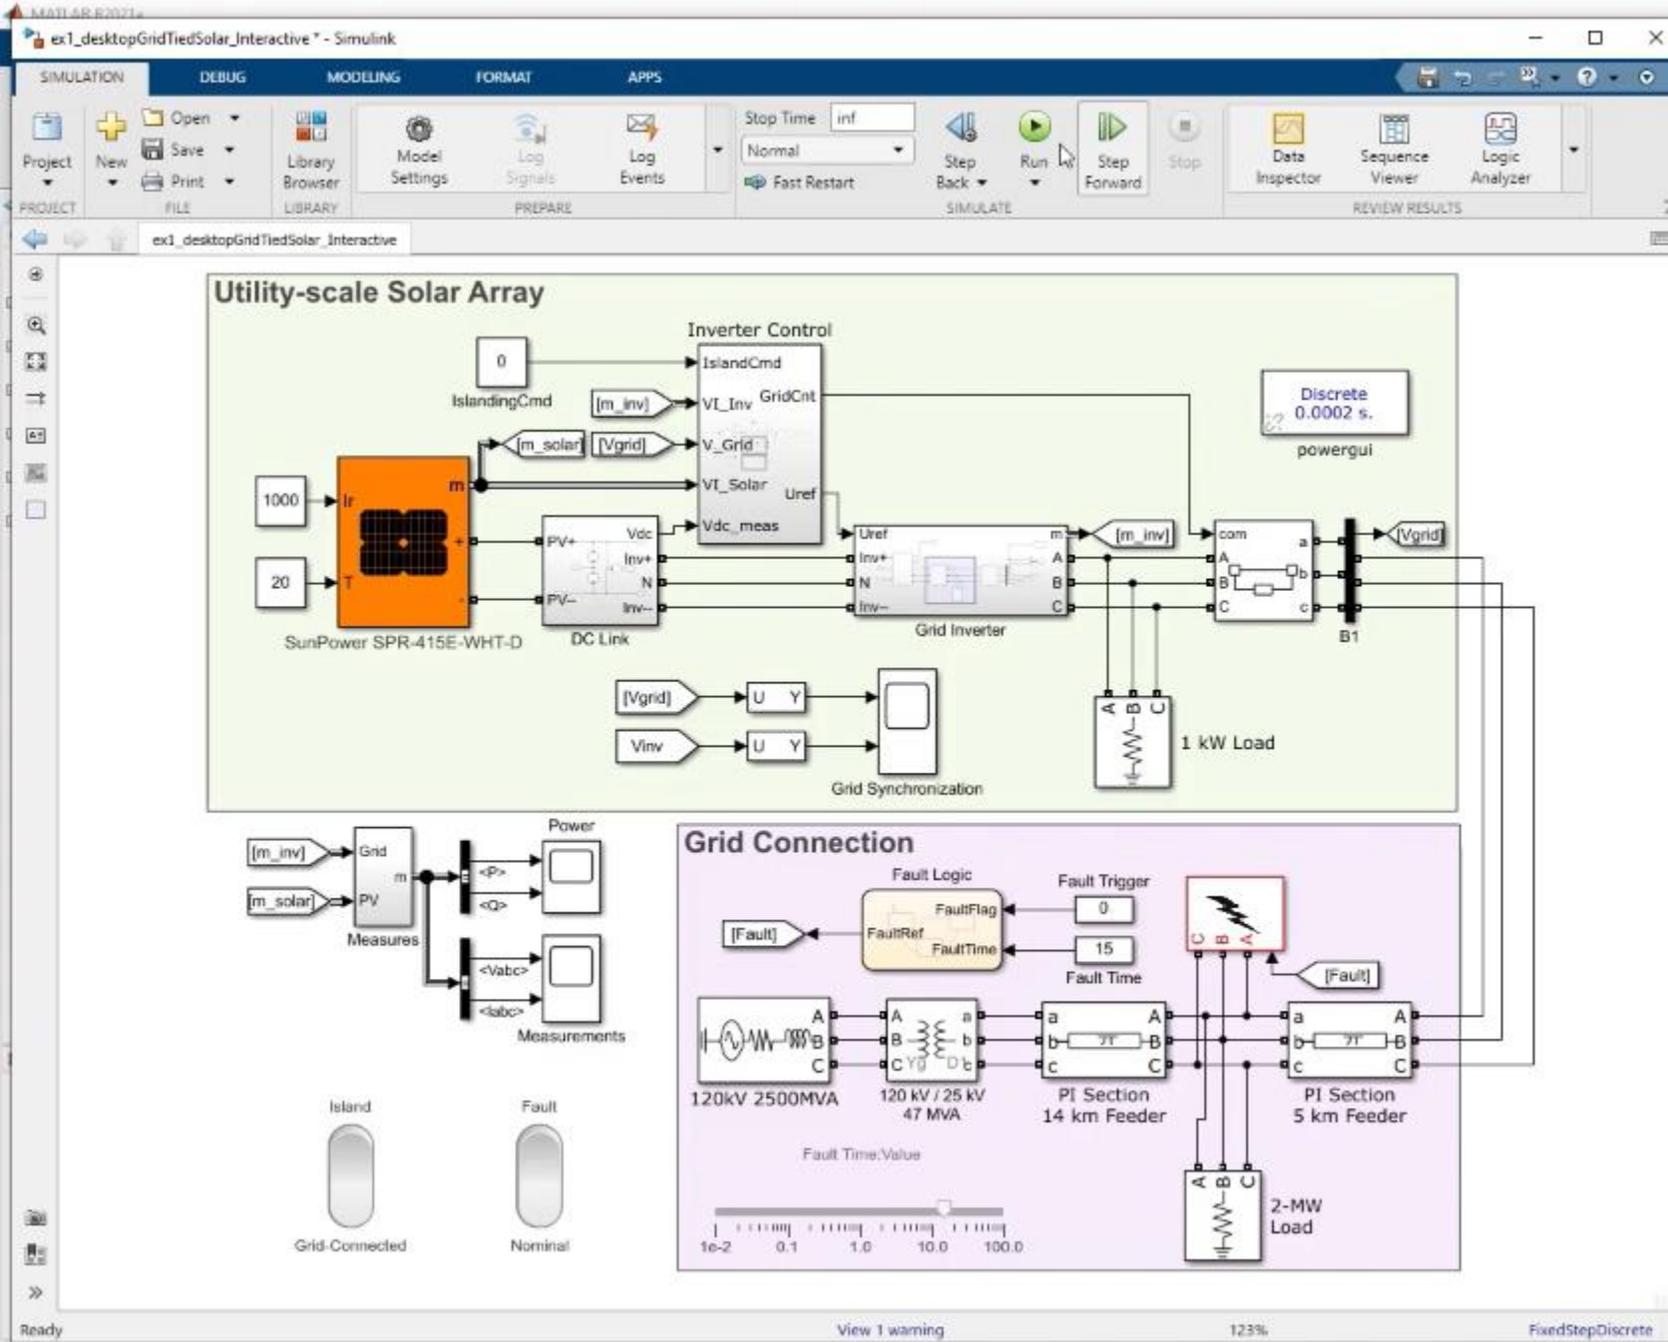

Full Switching

Example Solar Inverter Simulation – For Equipment Design

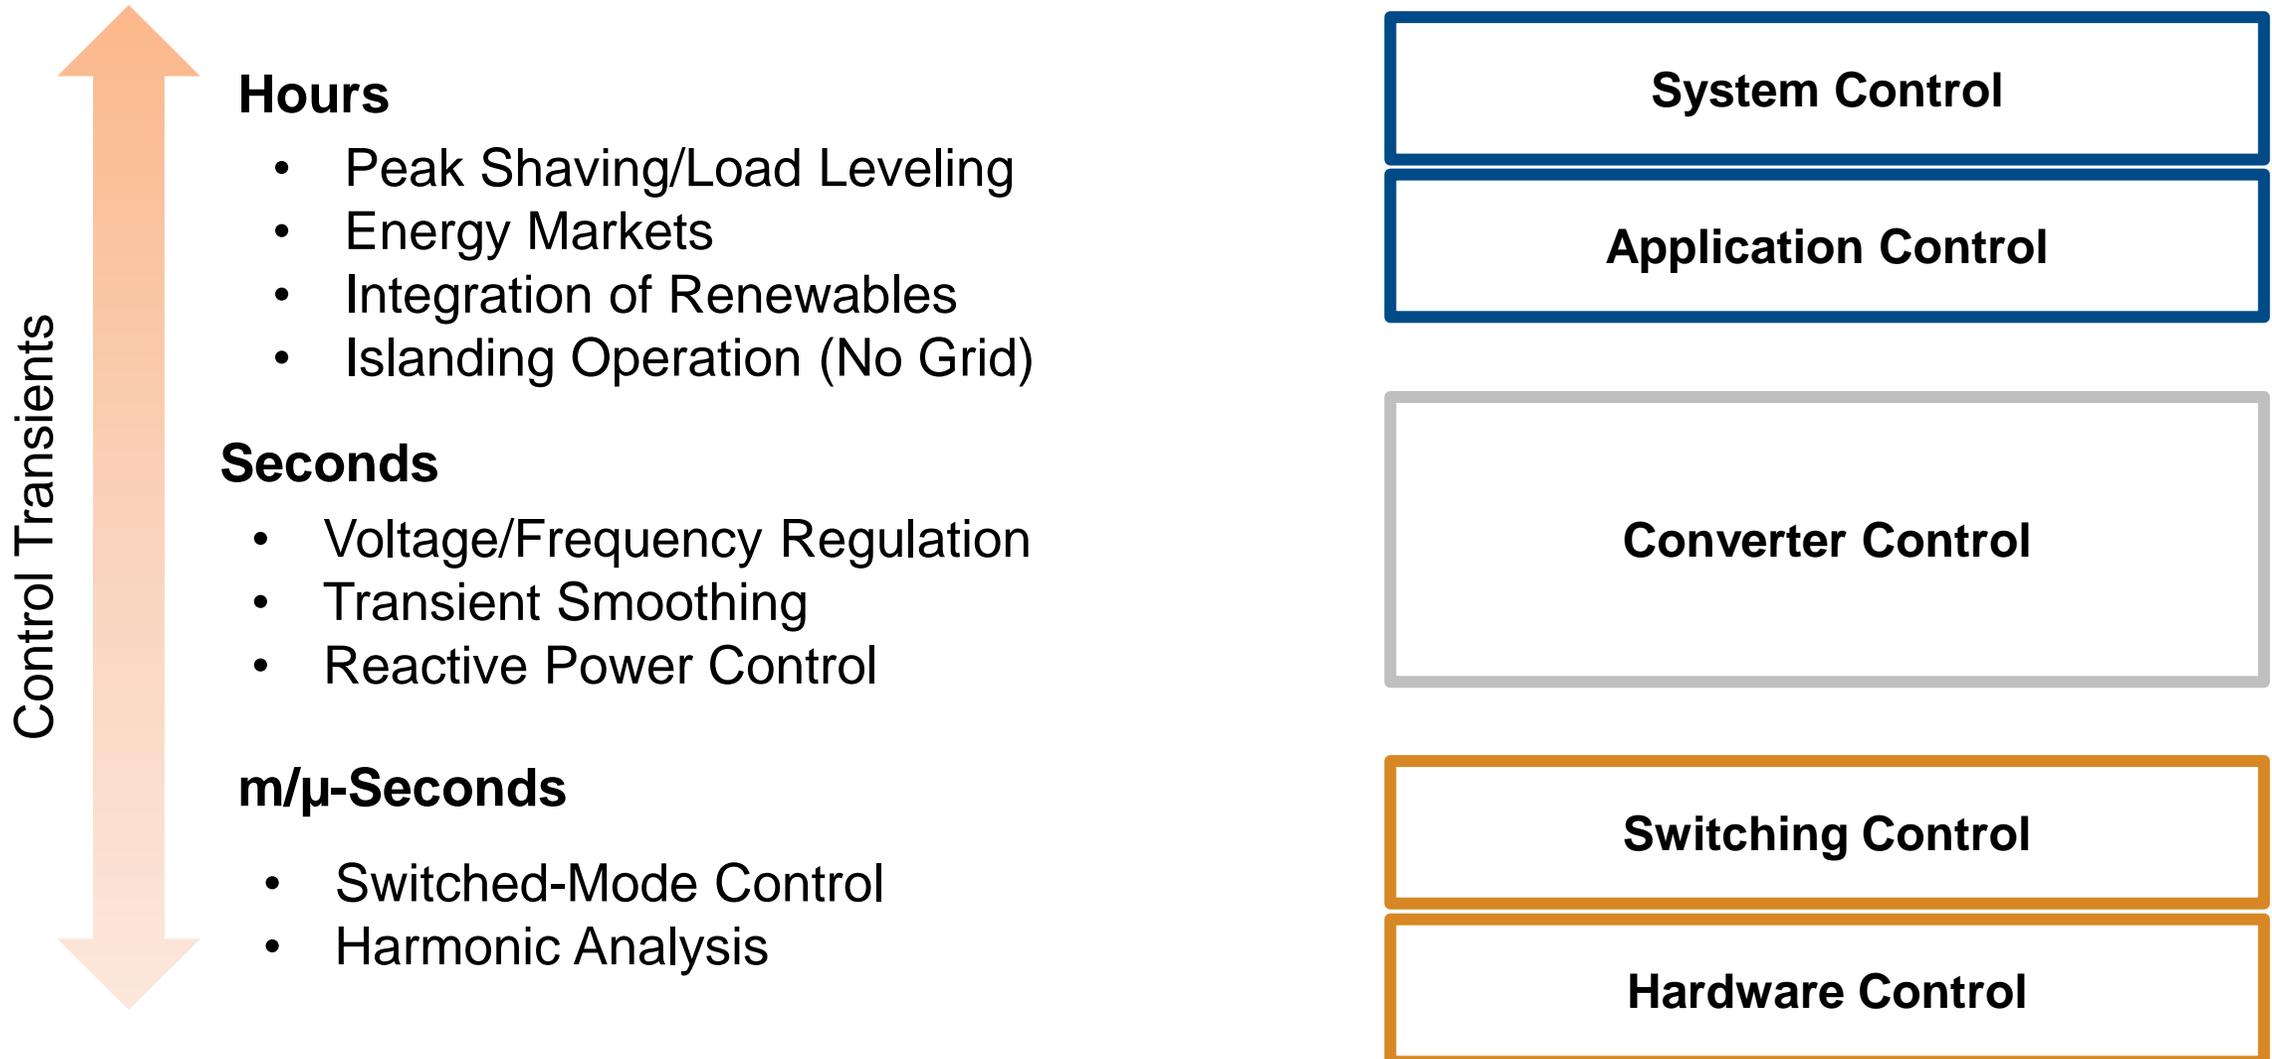

Inverter Designers Leverage Proprietary Control

Layers of Control in Smart Grid Applications

IEEE1676 – Power Electronic Building Blocks

Agenda

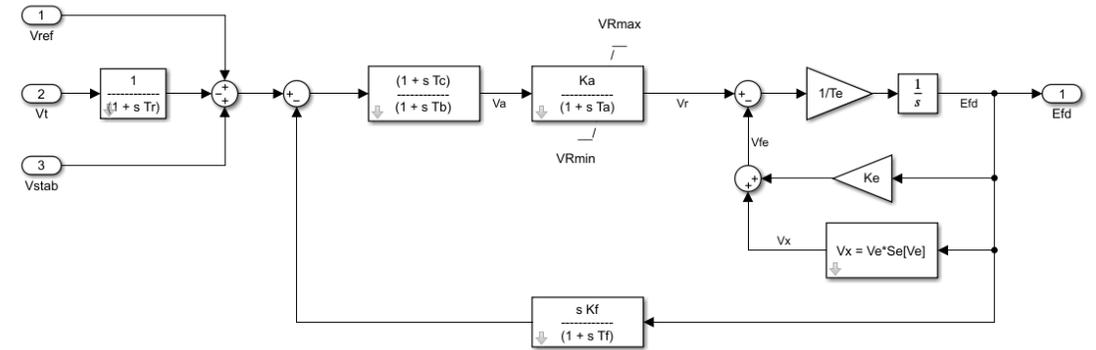

- Modeling and Simulation of Renewable Energy Systems
- **System-level and control system design for smart grids**
- Deploying and testing control systems

What is Model Validation?

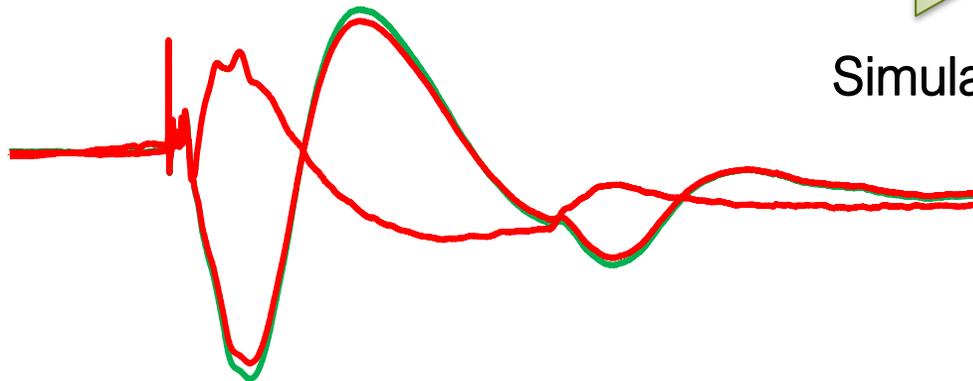

Renewables Field Equipment

Standardized Models of Equipment

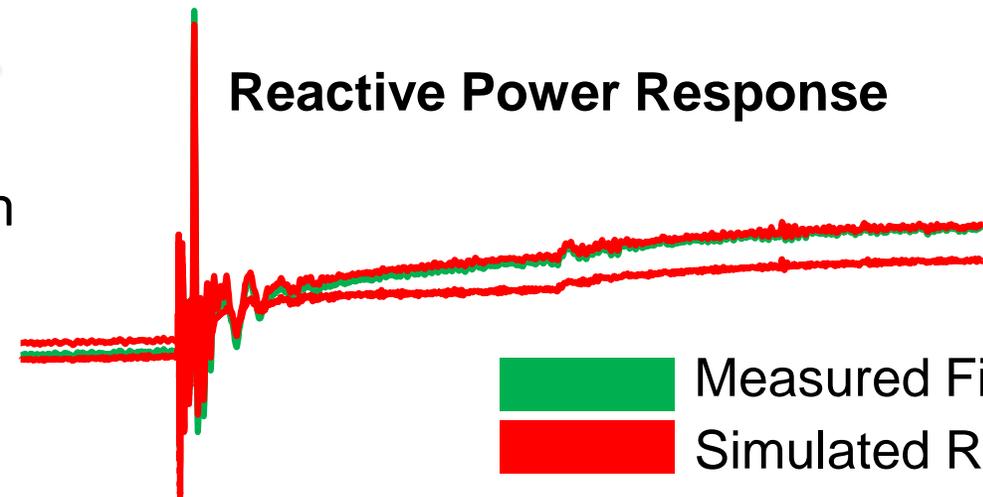

Active Power Response

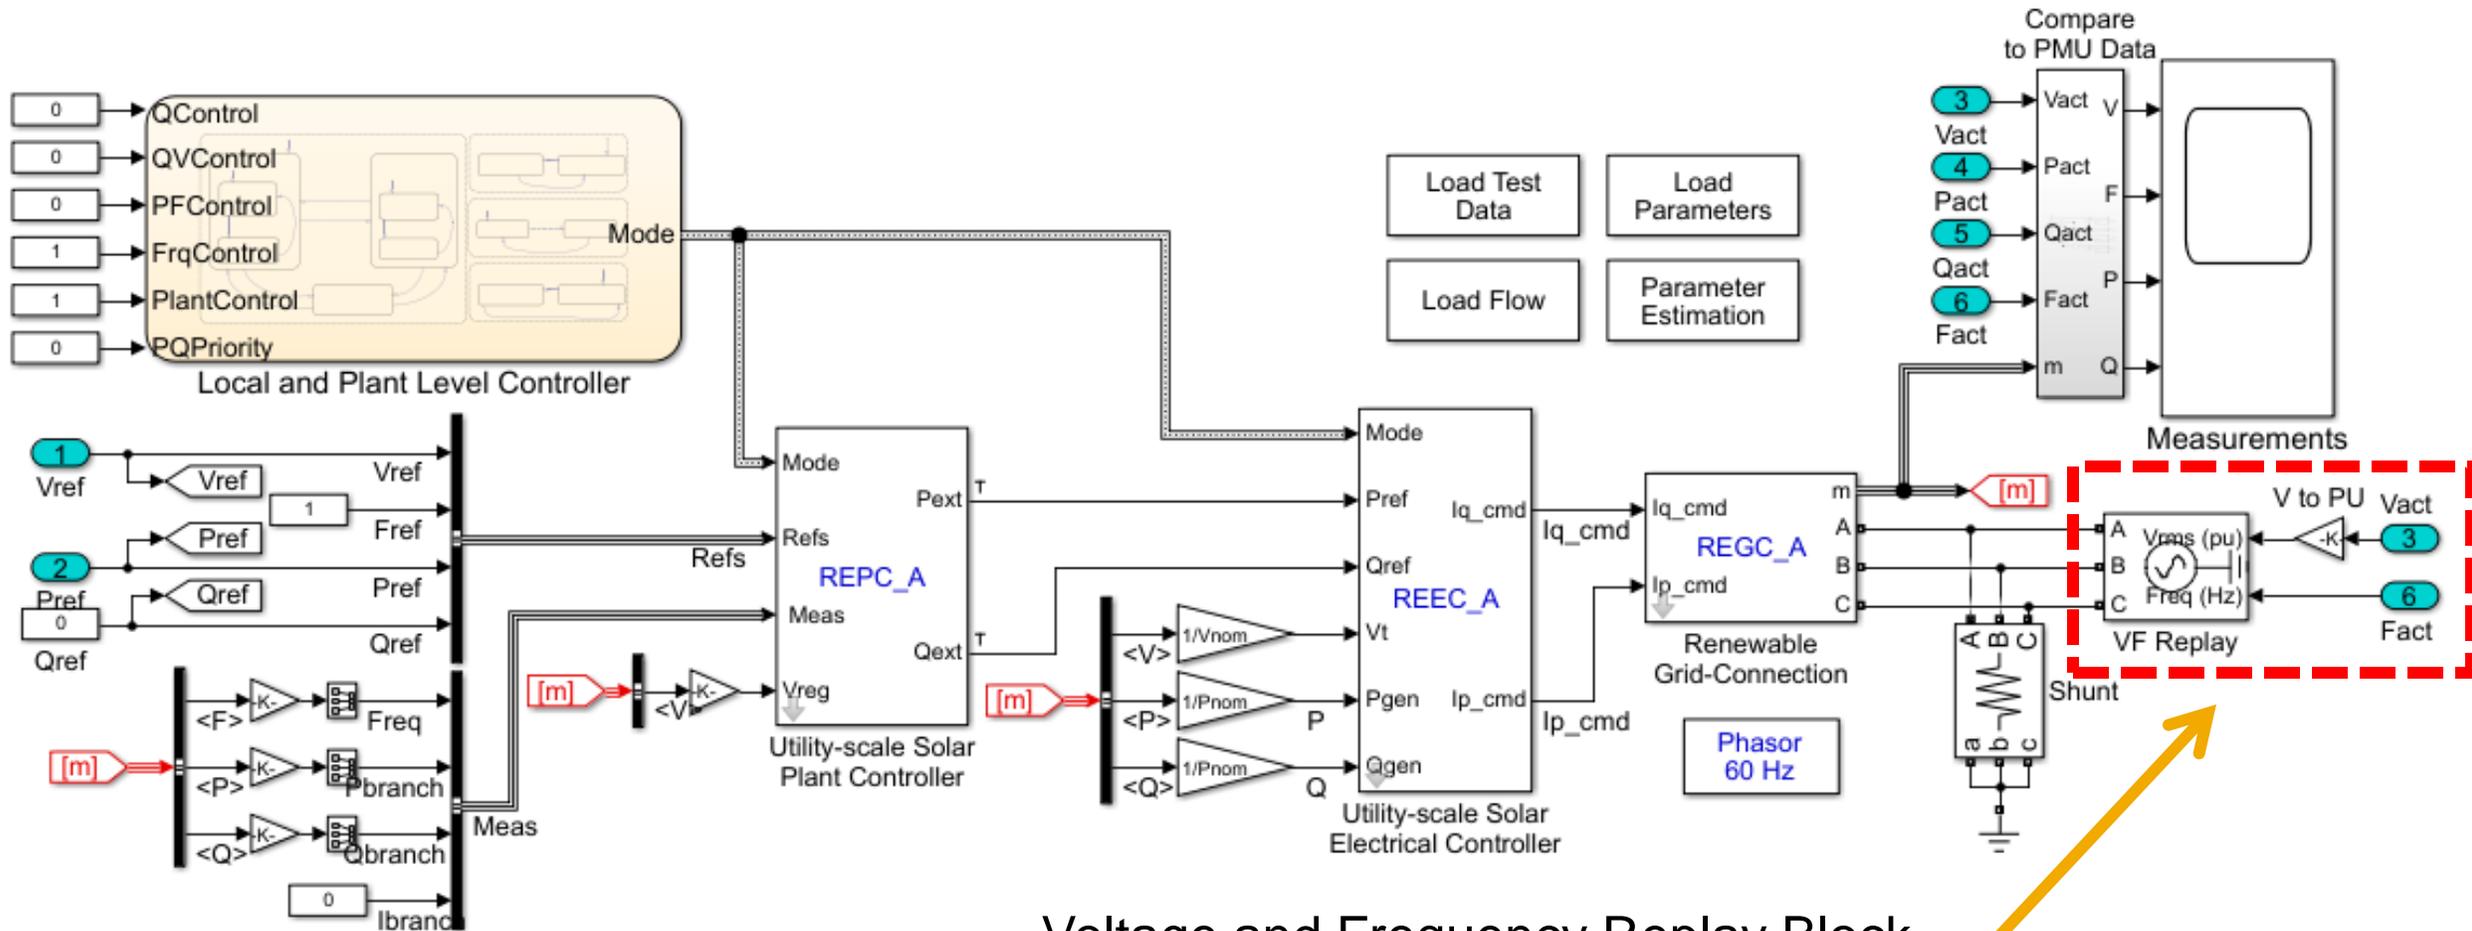

Simulation

Reactive Power Response

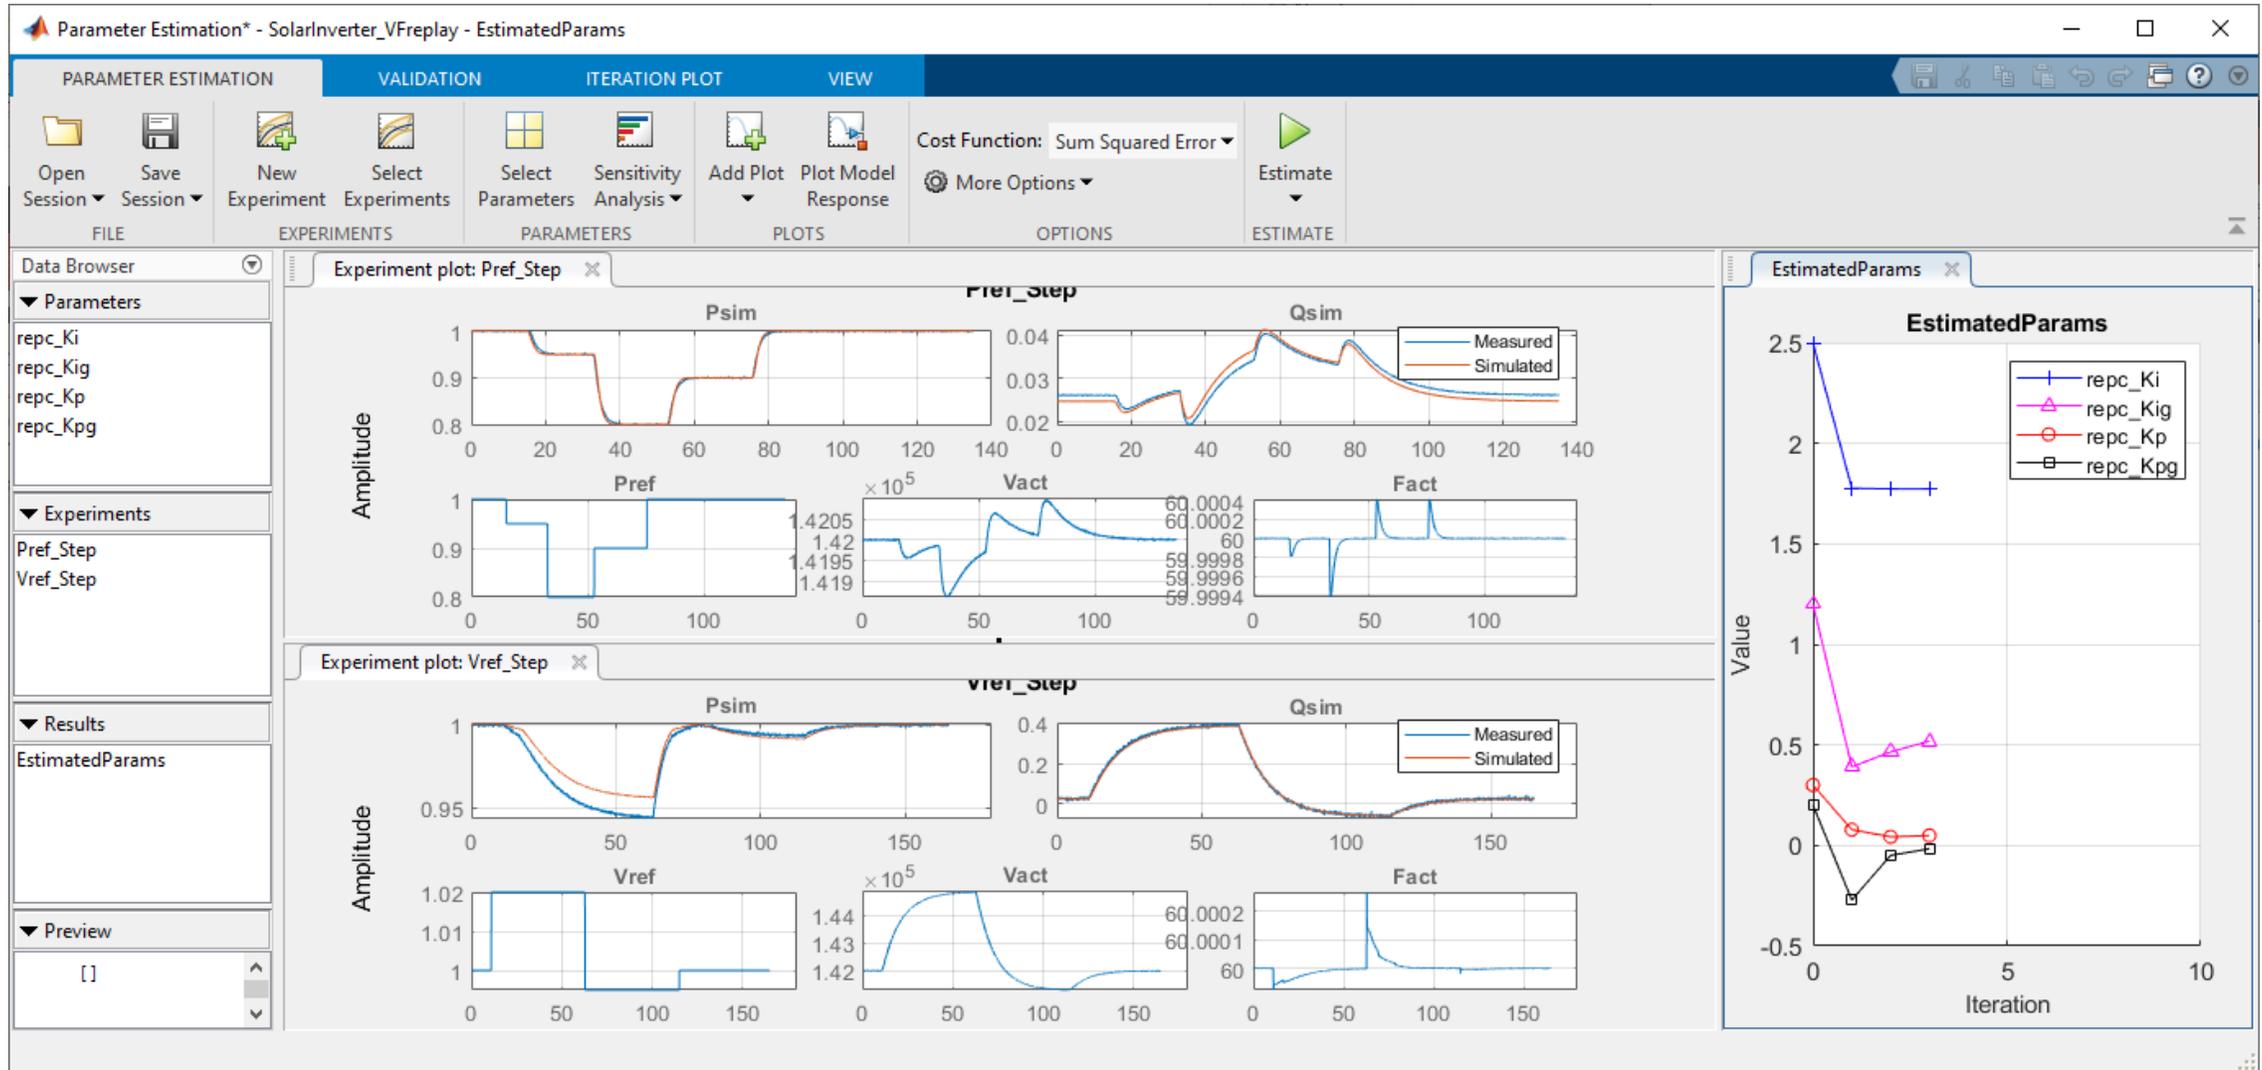

“Replay” Field Measurements to Compare Model to Data

Use Field Voltage/Frequency and Match Plant P/Q Response

Voltage and Frequency Replay Block
Replaces “Simulated” Grid to Leverage Field Data

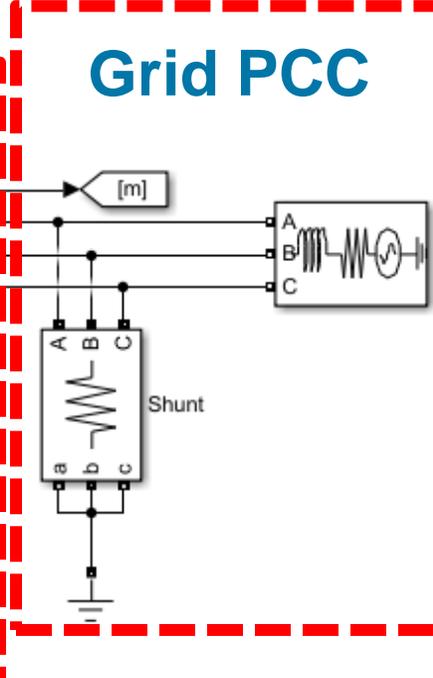

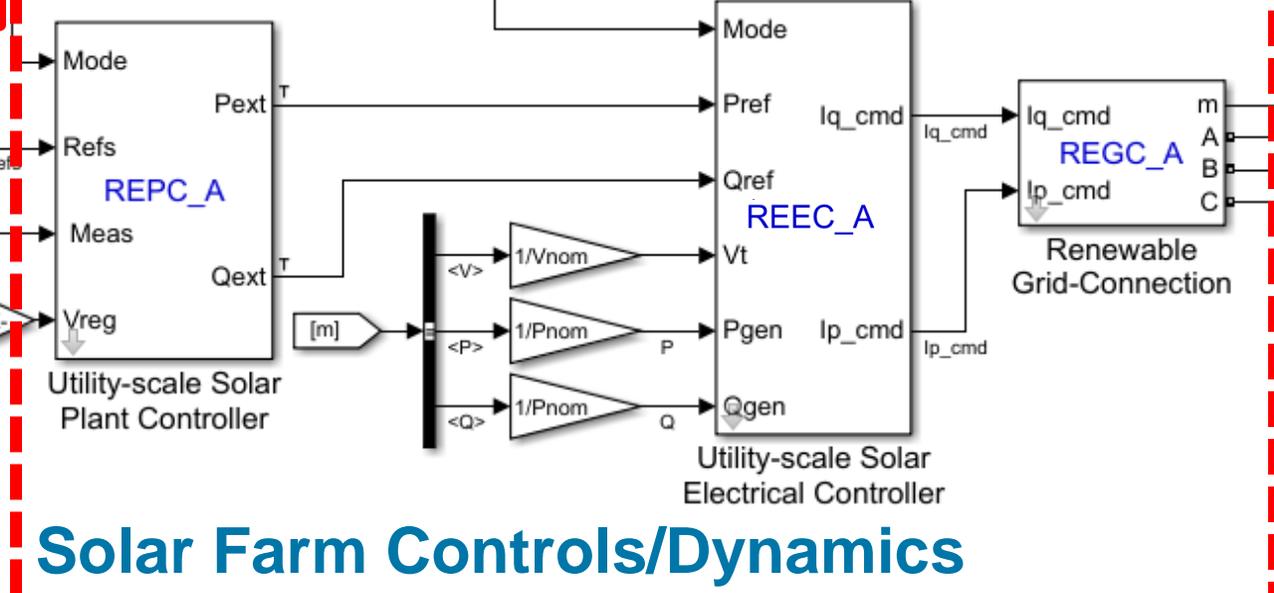

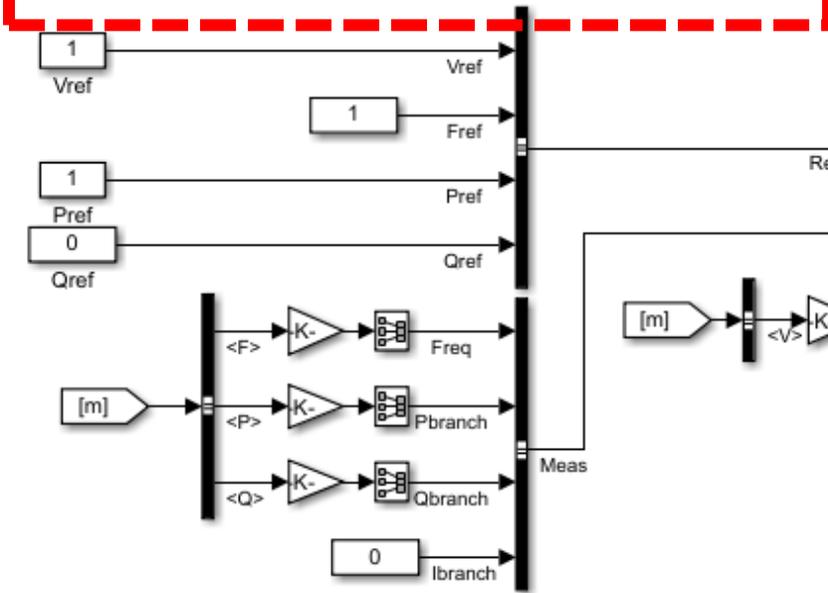

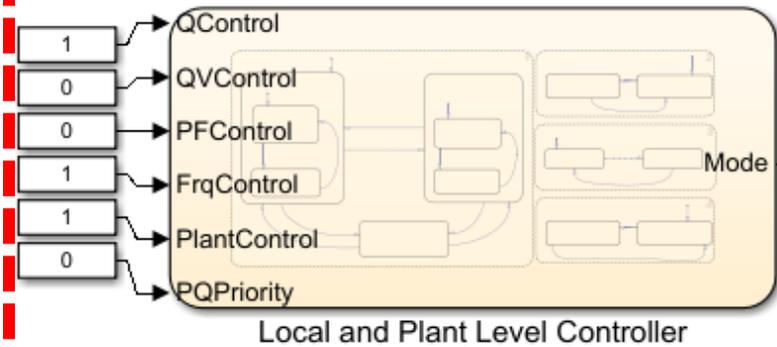

Parameter Estimation for Multiple Grid Tests

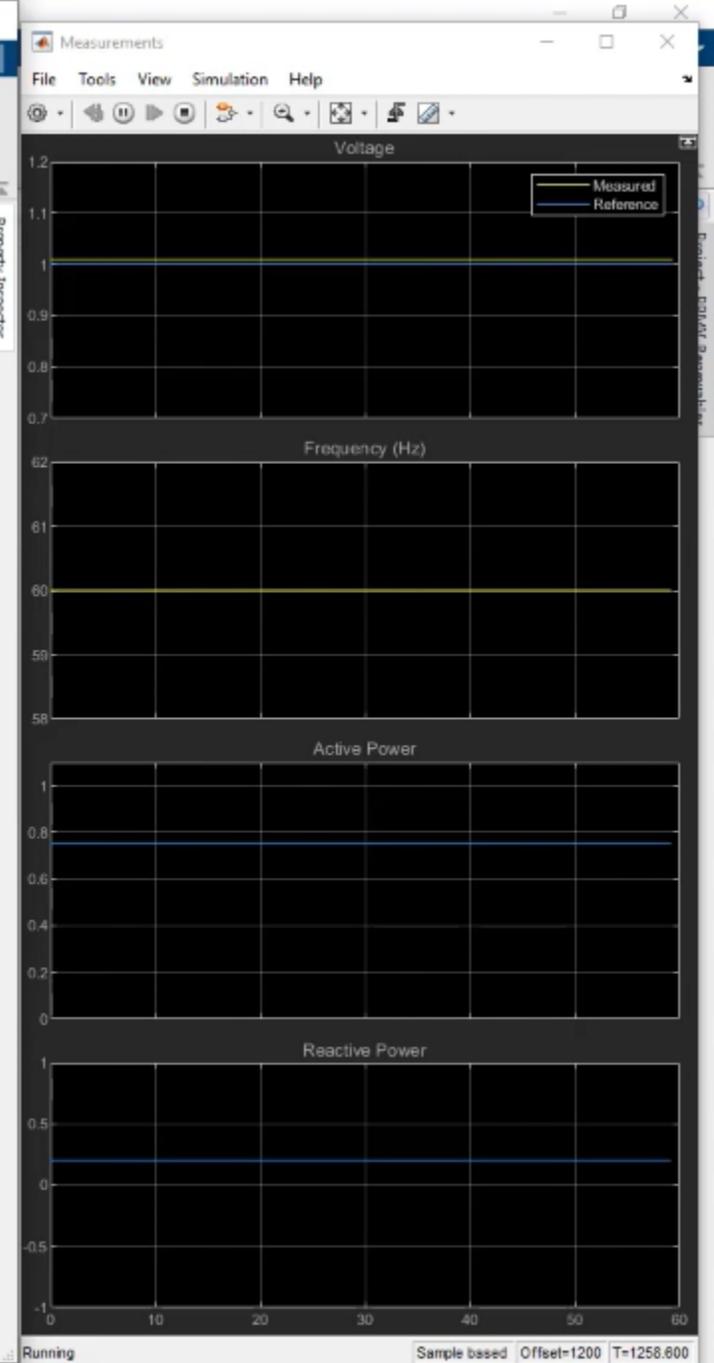

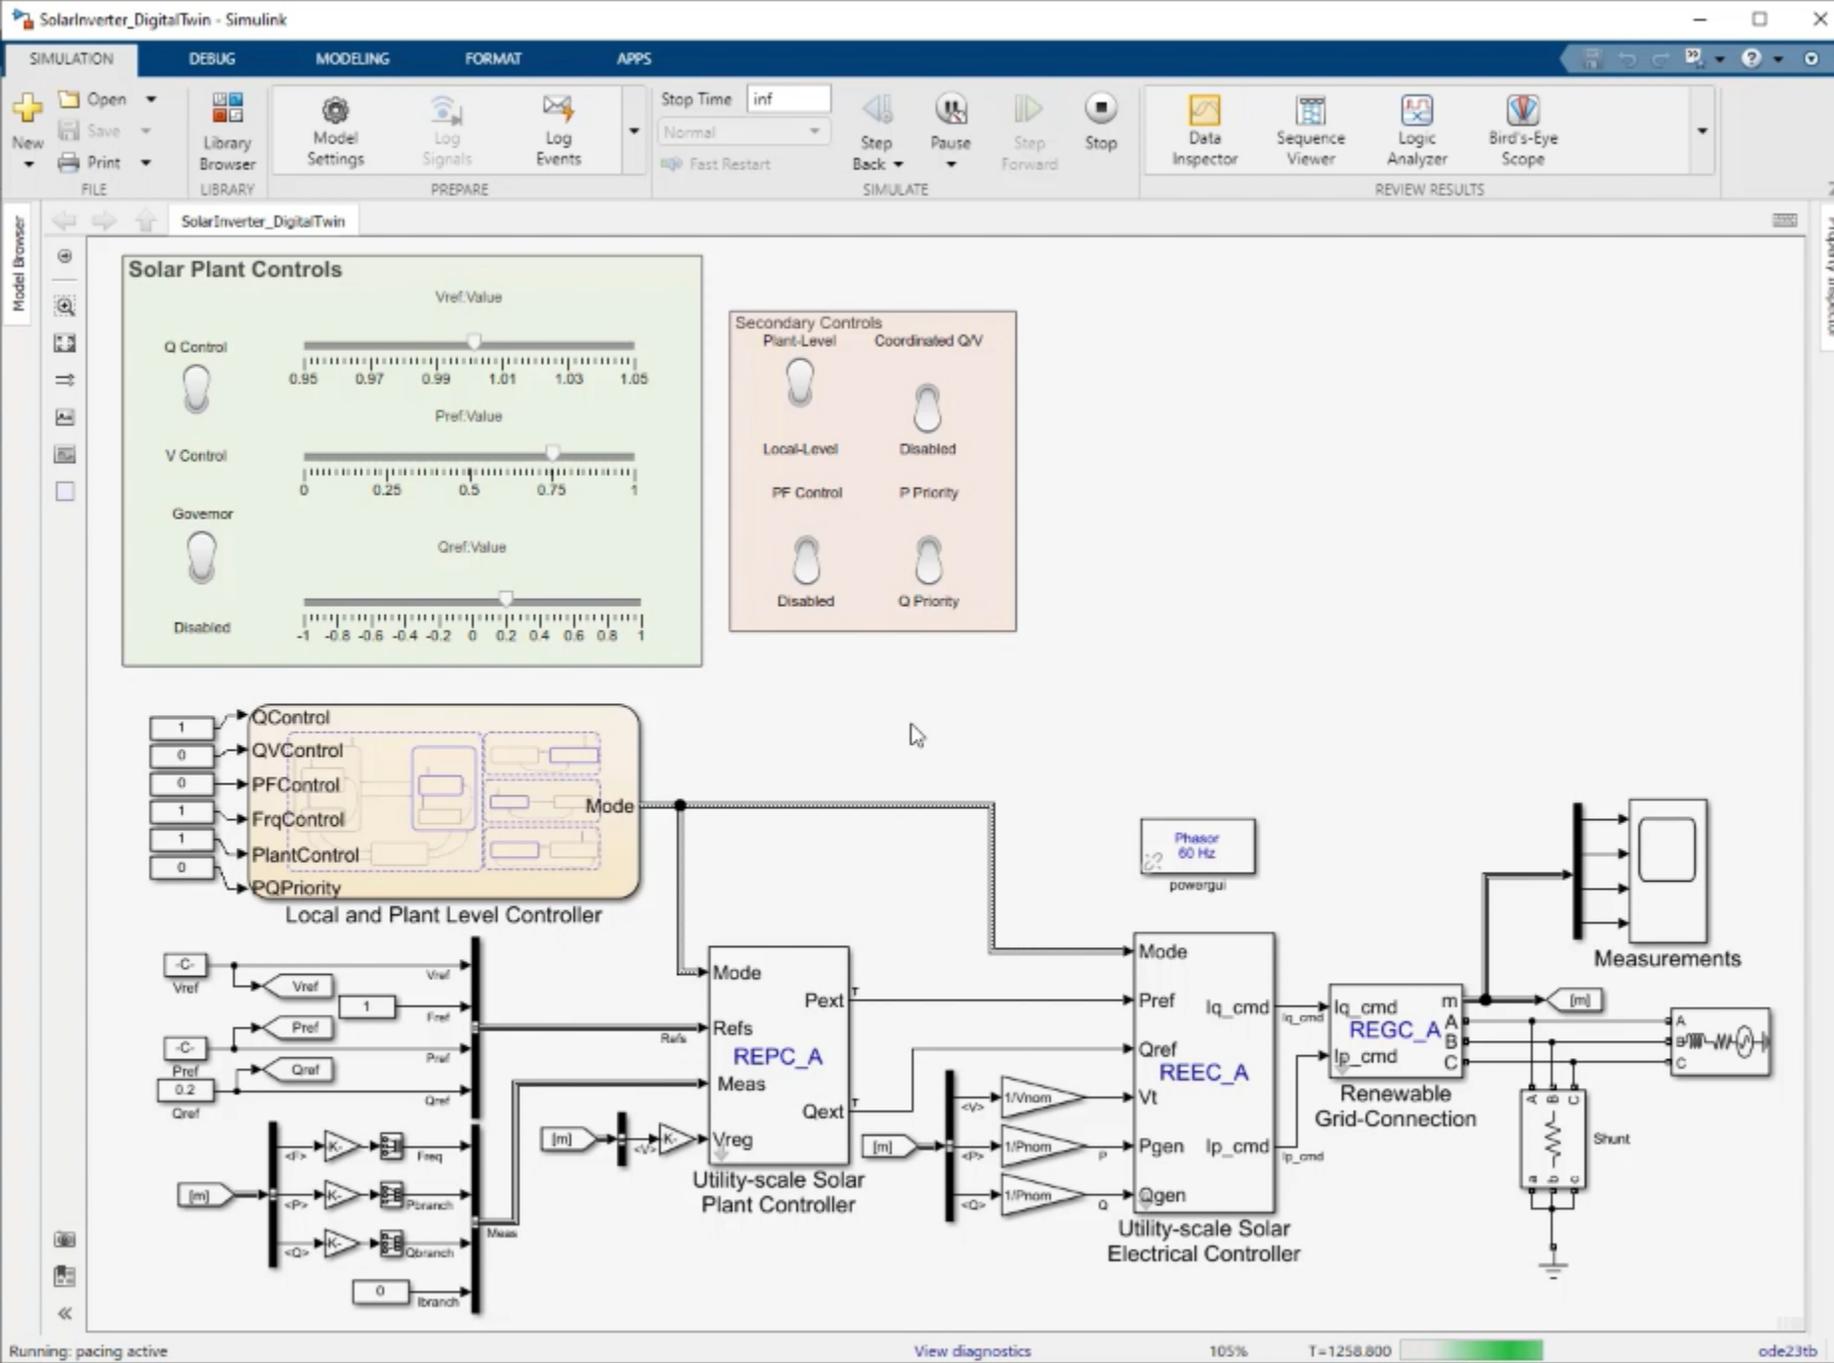

Central Station Solar Plant in Simscape Electrical

IEEE Standardized Controls for System-Studies and Validation

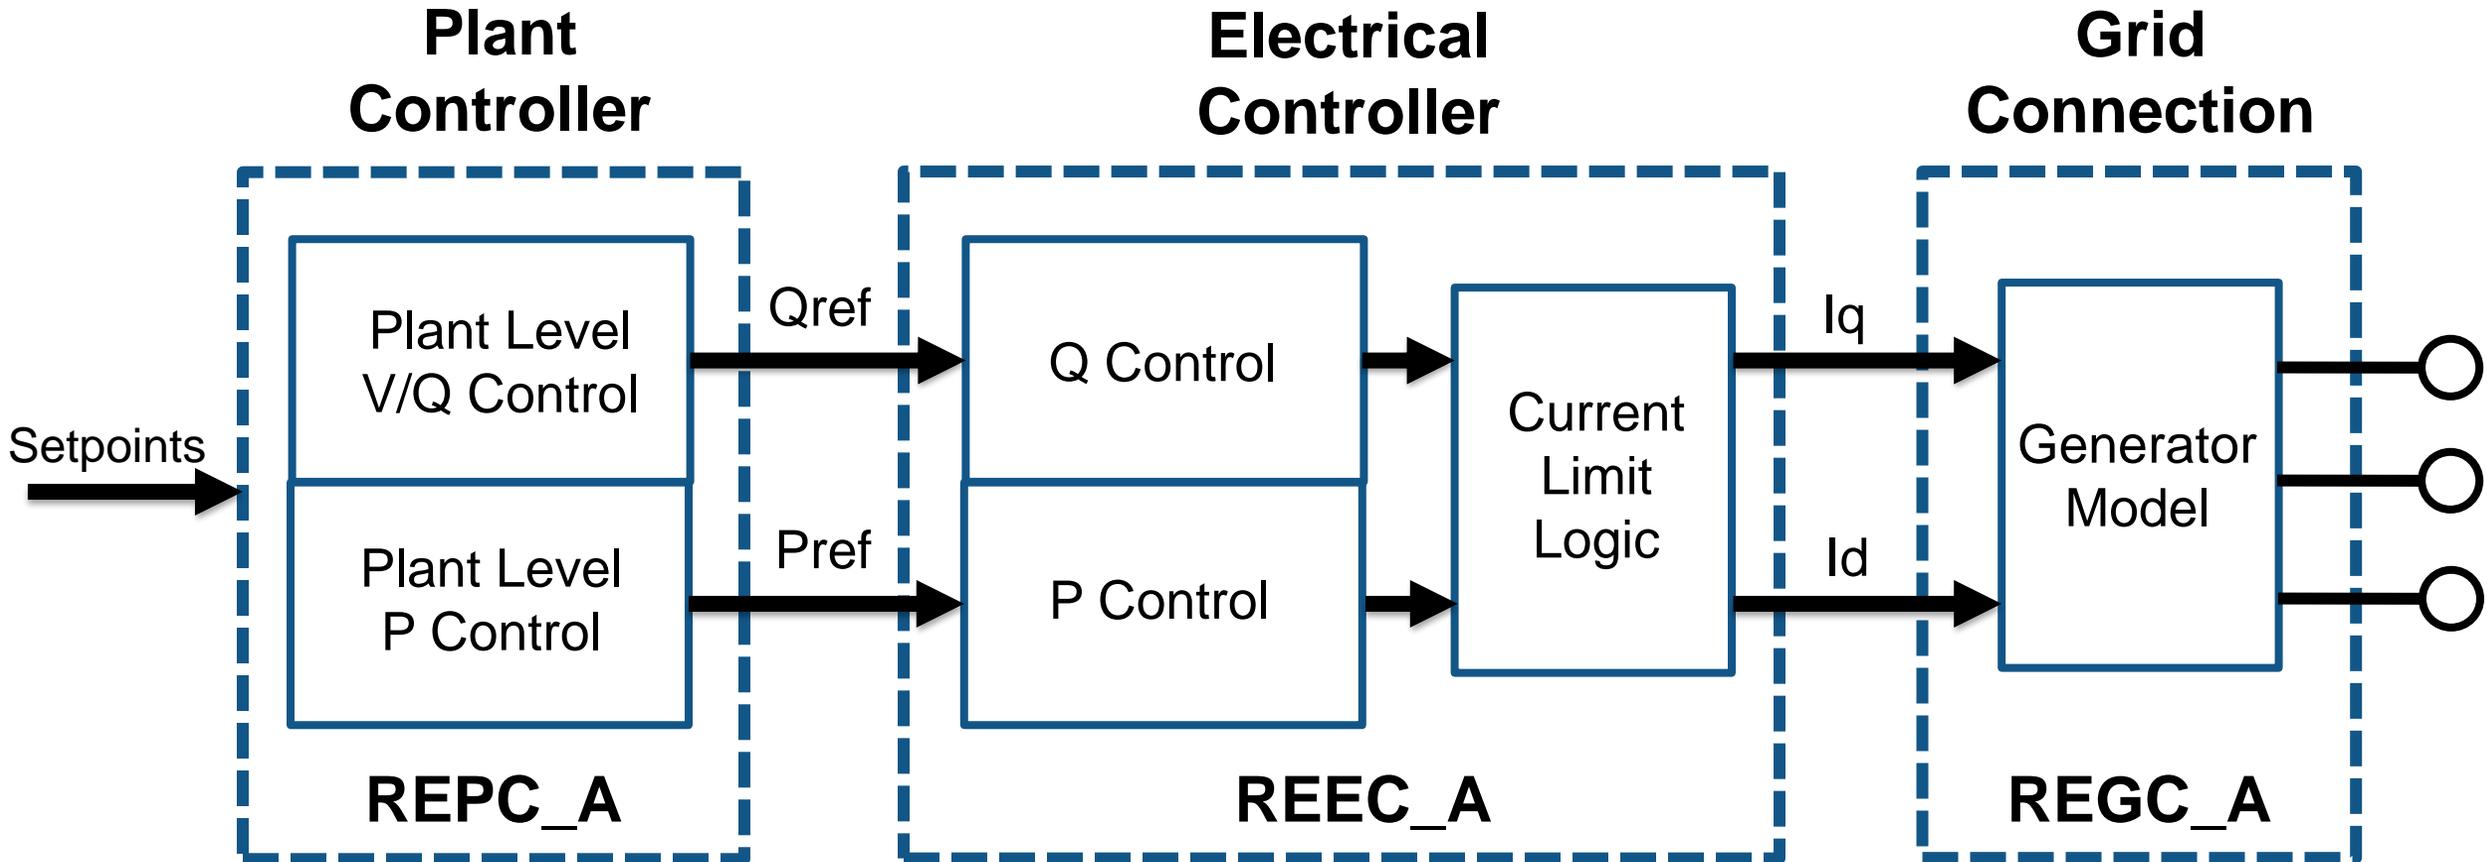

Plant Mode Control

Central Station Solar Plant One-line Diagram and Controls

IEEE Standardized Controls for System-Studies and Validation

Measured Field Data
 Simulated Response

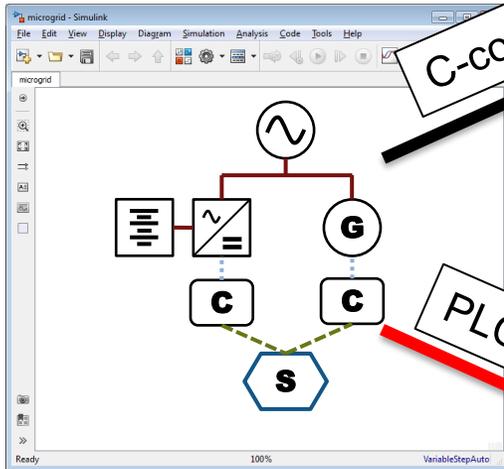

Agenda

- Modeling and Simulation of Renewable Energy Systems
- System-level and control system design for smart grids
- **Deploying and testing control systems**

Testing Grid Controls with Hardware-in-the-Loop

ANNOUNCEMENT Registration Now Open for MathWorks AUTOMOTIVE CONFERENCE 2025

Hello Community, We're excited to announce that registration is now open for the...

Renewable Energy Integration Design with Simscape

Version 24.1.2.1 (357 MB) by MathWorks Simscape Team STAFF

The repository provides design solutions that aid the operation of power systems with high penetration of renewable energy sources. <https://github.com/simscape/Renewable-Energy-Integration-Simscape>

Renewable Energy Integration Design with Simscape

This repository provides engineering solutions for the operation of power systems with high penetration of renewable energy sources. The developed models comply with current IEEE/IEC and national grid standards.

File Exchange Open in MATLAB Online

This Repository Includes the Following Engineering Solutions

1. Evaluate Performance of MTHVDC System with GFM Control for Offshore Wind Integration.
2. Evaluate Performance of Grid Forming Controls for Type 4 Wind Generators in Wind Farm.
3. Assess the Stability of Inverter-Based Resources using Admittance Scan Technique.
4. Performance Evaluation of Grid Forming Battery Energy Storage Systems in Solar PV Plants.

Overview

Performance Evaluation of Grid Forming Battery Energy Storage Systems in Solar PV Plants

Requires

- MATLAB
- Simulink
- Control System Toolbox
- MATLAB Test
- Simscape
- Simscape Electrical
- System Identification Toolbox

MATLAB Release Compatibility

Created with R2024a
Compatible with R2022b to R2024a

Platform Compatibility

Windows macOS Linux
